RE: Extension Request for Pelican Point Rock Products

Dear Mr. Jensen:

In behalf of *Pelican Point Rock Products* (formerly Larson Limestone), I would like to request an extension of at least 60 days for the map described below that was requested by the State of Utah, Division of Oil, Gas & Mining (DOGM).

In a letter sent to the quarry from you dated August 19, 2003, it was requested that an updated map be drafted of the Pelican Point operations showing 'current surface facilities and disturbances' to assist in DOGM's review of surety bond estimates.

Justification for an extension for this submittal is based on the fact that *Mt. Nebo Scientific, Inc.* and *Pelican Point Rock Products* have been working closely with the State of Utah, School and Institutional Trust Lands Administration (SITLA) on a Notice of Intent to expand mineral operations to adjacent lease property. During this process some survey work and additional base maps have been created delineating the new lease areas. These maps and other pertinent information have recently been submitted to SITLA.

By adding these new lease areas to the current permit area, and with the recent submittal to SITLA, it is recognized that *Pelican Point Rock Products* must also notify and address permitting requirements (e.g. updating their NOI) to DOGM, including maps. To date we have been working on other maps of the permit area, not updating disturbed areas. We would like to prepare the new disturbance map when we have adequate survey information to accurately represent these areas. A portion of this work has been done, but not enough to complete a new map.

Ideally, we would like to prepare an updated NOI document (including the map you requested) in one submittal to DOGM. To do this, we may need more time than the

extension requested above. If this is not possible, we will commit to providing the requested map by December 19, 2003.

Your consideration in this matter would be appreciated. Please contact me or John Sather at Pelican Point [(801) 430-4964] with your response to this request.

Sincerely,

Patrick D. Collins, Ph.D.  
Environmental Consultant
